# Custom CNC machining for parts made to drawing

LZZ is an ISO 9001-certified company machining custom parts from supplied drawings or samples. We review geometry, material, finish and inspection requirements before confirming an order.

## Machining services

- CNC milling and turning for custom parts and assemblies.
- 5-axis and multi-axis machining, with tool access and machine capacity assessed from your drawing.
- Orders from 1 piece. Production takes 7-14 business days after drawing and order confirmation, including surface finishing; shipping time is additional.

## Parts and materials

Examples include instrument housings, brackets, machined interfaces and prototype components. Common material families include aluminum, stainless steel, copper and brass, steels, and engineering plastics. Confirm the exact grade, condition and finish for each part.

| 2017 | 1,500 m2 | 40+ | 15+ years | About 100,000 |
|---|---|---|---|---|
| Founded in Hangzhou | Production facility | Machining and support equipment | Engineering team experience | Parts per month - reference capacity |

Application examples in the company brochure include laboratory and medical equipment, automotive and motorcycle parts, hydraulics, agriculture, robotics, aerospace and defense, semiconductor equipment, and fans/impellers. Discuss suitability, required approvals and export requirements for your project.

Equipment total includes machining and support equipment. Monthly output is a reference capacity and varies with part geometry, material, finishing and production mix.

# From drawing to delivery

Orders start at 1 piece. Production takes 7-14 business days after drawing and order confirmation, including surface finishing; transit is additional. The quotation confirms price, acceptance and shipping details.

01

### Share the part

Send the drawing or sample, revision, quantity and intended use.

02

### Review the details

Identify critical features, material, finish and inspection records.

03

### Confirm the quote

Agree price, inspection records, shipping scope and terms.

04

### Make and inspect

Plan sample, in-process and final checks to the agreed criteria.

05

### Approve and ship

Confirm packing, documents, destination and dispatch plan.

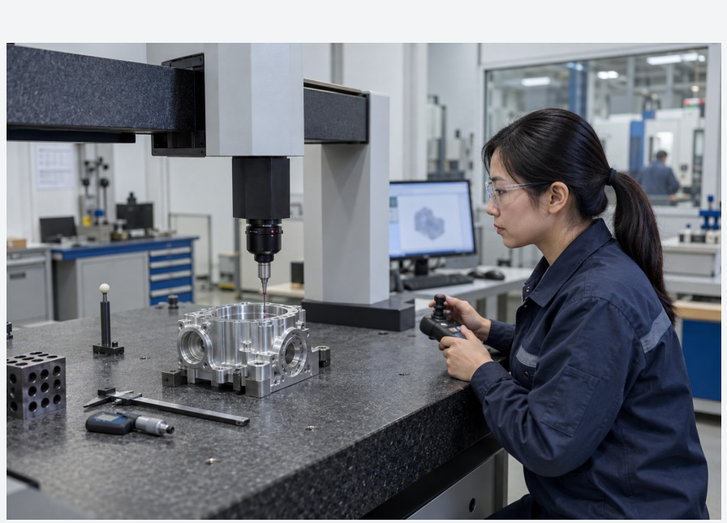

## Materials, finish and export details

Material examples in the brochure: aluminum 6061/7075/2024; stainless steel 304/316/17-4PH; copper/brass C3600/H62; plastics POM/PEEK/PPSU; titanium, Inconel, Kovar and Invar. Specify the exact grade and condition, then confirm availability and required material documents. The brochure's C3600 designation needs confirmation against the requested standard; the list does not establish stock availability or suitability for every part.

State the required finish standard and revision, masked areas, cosmetic faces and dimensions that apply after treatment. For export orders, provide the destination and required arrival date; confirm dispatch date, carrier or freight method, Incoterm, customs, duties and taxes in the quotation. Transit time is separate from production time.

## Include these details in your RFQ

- Drawing or model with revision and critical dimensions
- Quantity by part number and expected repeat demand, if known
- Material grade, finish standard and required documentation
- Inspection method, sample plan and report format
- Needed-by date, destination and shipping terms

## Inspection and feature-specific tolerances

Specify datums and critical features on the controlled drawing. Agree the measurement method, sampling and reports. A tolerance of ±0.01 mm may be considered for selected features after engineering review; feasibility depends on material, setup and measurement method. This is not a general tolerance or guarantee. Confirm instrument range and current calibration documentation, with the inspection records available for your order.
